# Proposal for Final Project

- Name: Jordan Abujaber
- Period: 2
- Description: I intend to create a personal website for myself as a developer, a landing page. I plan to create the website with 4-6 pages, and would like to add areas where people can contact me if interested. There will be a website simulator where the user can select some aspects of how they would like their website to look
- What makes your project unique: Well, no one else is going to have the features I intend to incorporate such as an information request where the customer can contact me via the webpage, and I will also add my own twist of design and color combintations
- Software: Atom; Language: CSS/HTML, and Javascript, bootstrap; Also intend to use wire framing
- Expected challenges: Mobile resizing, bootstrap carousel, and the contact section. How I intend to meet them? : Take my time and work at a moderate pace.
-

Include header; Basic framing of website; Create clean design; Add buttons to additional pages; welcome page

Create a page that showcases work I've done and work that I can do; carousel comes into play

Create a contact page with contact info and allow user to contact you

Create additional pages and make them all mobile responsive

- List of Milestones
- Week 1 (create welcome page and add a button to enter the website which takes you to about me page, also work on logo)
- Week 2 (Create structure of about me page, add picture, and add a carousel with images of work ive done, finish up logo as well)
- Week 3 (add a page where people can contact me with with their info, use js)
- Week 4 (also add a box where they can schedule a meeting with me with time and date; there will be a selection for the day, time, and the location can be entered)
- Week 5 (create page with website packages and descriptions, and complete structure with headers and div boxes, work on buttons for people to select package and email to themselves, create it in the format where people can request packages)
- Week 6 (work on a website builder simulator where user can work on editing their design how they would like it; create the function where the cursor can drag out a box with black outlines, and set length and width of the webpage)
- Week 7 (Continue on simulator, and add where the user can select which colors and patterns they would like, add drop down menu where they can select the pattern for header and footer)
- Week 8 (continue work on simulator, continue work on drop down menu and add selections)
- Week 9 (continue working on simulator, add ability for people to insert text into desired area)
- Week 10 (Continue work on simulator, continue on adding text ability, create the box where people can drag to add text)
- Week 11 (Allow user to press button and email a copy of their desired web design to themselves)
- Week 12 (continue work on allowing user to email copy of their design direct using a button, link direct to my email)
- Week 13 (Make everything including simulator mobile responsive)
- Week 14 (Continue work on making entire website mobile responsive)
- Week 15 (Final touches needed will be added, check design aspect, make sure everything works properly, change design, boxes, based on work as a whole)
- Week 16 (add more customizable features to simulator such as designing and combining multiple page designs and saving as a whole)
- Week 17 (drop down menu added for each individual option (header, footer, and body) while designing website in simulator
)
- Week 18 (send automatic email in response once initial email for job or info request has been sent)
- Week 19 (link to social media pages via buttons)

- Week 20 (Create a feedback page that the customer can access after they have made a purchase)
